

ABSTRACT

A method and apparatus for enhancing performance of a high-capacity storage media in a digital imaging device. The method aspect of the present invention includes, storing images on the storage media, where the images include tags for categorizing the images. A category list is generated from the tags in the images and the category list is stored on the storage media. A category within the category list is designated as a default category. The method further includes accessing the image category list in order to display the images, wherein only the images belonging to the default category are displayed, thereby speeding access to, and display of, the images.
